### Linear Algebra - Greg Grant

Section 12: Systems of Linear Equations Page 5 Clarification: In Exercise 6 of this section they ask us to show, in the special case of two equations and two unknowns, that two homogeneous linear systems have the exact same solutions then they have the same row-reduced echelon form (we know the converse is always true by Theorem 3, page 7)

### Linear Algebra and Its Applications (Fourth Edition)

Linear algebra moves steadily to  $n$  vectors in  $m$ -dimensional space We still want combinations of the columns (in the column space) We still get  $m$  equations to produce  $b$  (one for each row) Those equations may or may not have a solution They always have a least-squares solution The interplay of columns and rows is the heart of linear algebra
